

## Dječija kardiologija • Barnkardiologi

### MRB – multirezistentne bakterije

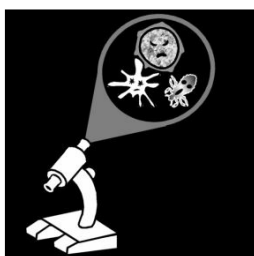

MRB—multiresistenta bakterier

Da li je Vaše dijete bilo u bolnici ili dječjem dispanzeru van Švedske u posljednjih godinu dana? U tom slučaju morate uraditi bakteriološki test najkasnije sedam dana prije operacije Vašeg djeteta.

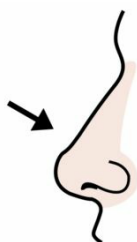

Har ditt barn varit på sjukhus eller vårdcentral utanför Sverige det senaste året? I sådana fall måste ni ta ett bakterieprov senast en vecka innan ditt barn ska opereras.

Ponesite ovaj papir i otiđite u Dom zdravlja ili Dječji dispanzer.

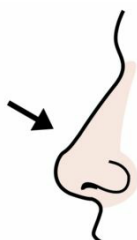

Ta med dig detta papper och gå till en vårdcentral eller barnmottagning.

Informacije Domu zdravlja ili Dječjem dispanzeru

Mom djetetu treba uzorak iz:

- nosa
- grla

Information till vårdcentral eller mottagning.

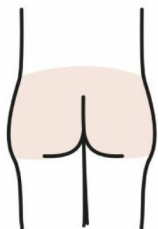

Mitt barn behöver odling från:

- näsa
- svalg

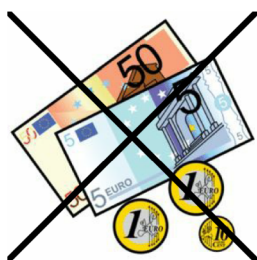

## Dječija kardiologija • Barnkardiologi

### MRB – multirezistentne bakterije

MRB—multiresistenta bakterier

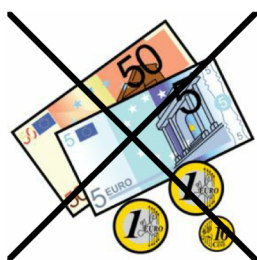

- perineuma (između genitalija i rektuma)
- rektuma / sa dodatkom VRE i ESBL
- perineum (mellan ändtarm och könsorgan)
- rectum/faeces med tillägg VRE och ESBL

Zakon o zaraznim bolestima kaže da pacijent mora dati uzorak.

Pacijent ne mora platiti. Vi koji uzimate uzorak ne morate platiti analizu.

Smittskyddslagen säger att patienten ska göra odlingen.

Patienten ska inte betala. Ni som tar odlingen behöver inte betala för analysen.
